TRINETX DIAMOND NETWORK™

Driving Effective Research Through the TriNetX Diamond Network

Facets of the Diamond Network

Extensive Coverage

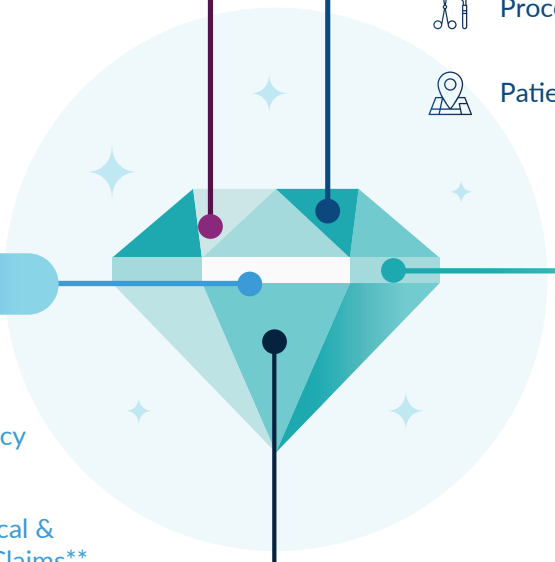
190 MILLION LIVES
OVER 7 YEARS

COVERED PATIENT DATA FROM
99% OF U.S. HEALTH PLANS

1.8 MILLION
PROVIDERS

Measures Available

- Demographics
- Diagnoses
- Medications
- Lab Results
- Procedures
- Vitals
- Patient Location



Data Source Breakdown

- **22%** Electronic Medical Records*
- **22%** Medical & Pharmacy Claims only
- **56%** EMR, Medical & Pharmacy Claims**

Cost Data

- Charged vs. paid amounts
- Health plan vs. out-of-pocket payments
- Prescription medication coupon use

Payer Types

- ✓ Commercial
- ✓ Medicare
- ✓ Medicaid
- ✓ VA

*Community-based Ambulatory Care Physician Practices
**Switch Data

Quickly query and analyze claims data without the cost and complexity

The Diamond Network adds ambulatory care and medical and pharmacy claims data to the TriNetX real-world data platform. Diamond Network is easy to access, simplifying the research and analysis process. We curate, standardize, map and host the data so you can focus on conducting meaningful research. The Diamond Network dataset is also available as a standalone purchase/download enabling organizations to conduct research using their own analytics engines.

Enhancing the power of the TriNetX platform

Combining data from the TriNetX Diamond Network with TriNetX Live significantly increases the power and capability of the world's largest clinical research platform. Researchers are able to:

- Generate insights with fresh, real-world data
- Perform analyses on representative data (across payers, care settings)

- Seamlessly run analyses on multiple datasets, without having to rewrite queries
- Follow patients across multiple settings of care

Real-world data for generating real-world evidence

- Design protocols and run feasibility analyses
- Profile target populations
- Study treatment pathways
- Conduct comparative effectiveness analyses
- Understand real-world drug performance
- Validate findings across data networks
