TRINETX DATA NETWORKS

Providing Longitudinal Real-World Data Tailored to Your Research Needs

TriNetX

Worldwide Coverage

Access real-world data from the world's largest network of healthcare organizations

Regional Focus

Find patients where you need them with networks organized by world region

Granular Access

License all networks or just the ones you need for your targeted research activity

Data in Harmony

Conduct analyses of international patients with standardized terminologies and units of measure

The Power of the Regional Data Networks

Real-world data (RWD) holds the key to unlocking critical insights into diseases and improving patients' lives. However the scale of the data can become unwieldy. In many cases, clinical trial managers conduct trials in a particular region, forcing researchers to spend valuable time segmenting massive, clinically-defined datasets by geography.

Sourcing RWD from many parts of the world independently can also cause an informatics nightmare. Types of data collected and terminologies used can vary greatly from country to country, or even hospital to hospital. Some healthcare organizations (HCOs) provide genomic data. Others don't. Some hospital rely on ICD-9 for diagnosis codes, others on ICD-10. Without a way to harmonize these differences, researchers can't glean information, let alone insight, from data.

TriNetX solves these problems by segmenting the vast amount of real-world patient data into networks defined by geography and standardizing the data to common terminologies. This enables researchers to quickly and easily refine queries to address region-specific criteria, providing a targeted view of the types and numbers of patients residing there. Segmenting

data into regional networks makes accessing the right data for the right trial much more manageable. TriNetX has organized its data networks in a way that mirrors how clinical trial managers think about their trials.

Myriad of Real-World Data Options

TriNetX offers flexible licensing options. You can choose to access data from the entire world, or you can choose to license data from a specific region that best meets your needs.

The TriNetX Networks

GLOBAL

Patient data from all global regions*

113 HCOs

400M patient lives

TriNetX

EMEA

Patient data from 13 countries across Europe and Middle East

41 HCOs

20M patient lives

USA

Patient data from across the U.S.

67 HCOs

90M patient lives

BRAZIL

Patient data from Brazil

3 HCOs plus 1 data partner

64M patient lives

SOUTH KOREA

Patient data from the Republic of South Korea

22 HCOs plus 1 data partner

25M patient lives

DATAWORKS / RESEARCH

Patient data from HCOs that participate in the downloadable Research Networkl

35 HCOs plus 1 data partner

51M patient lives

COVID-19 RAPID RESPONSE

Patient data from HCOs seeking sponsored research opportunities related to COVID-19

72 HCOs plus 1 data partner

75M patient lives

* South Korea is excluded from the Global network. South Korea is available as a standalone network only.

For more information on how to license one or more of the TriNetX networks, contact join@trinetx.com.

About TriNetX, LLC

TriNetX is the global health research network that connects the world of drug discovery and development from pharmaceutical company to study site, and investigator to patient by sharing real-world data to make clinical and observational research easier and more efficient. TriNetX combines real time access to longitudinal clinical data with state-of-the-art analytics to optimize protocol design and feasibility, site selection, patient recruitment, and enable discoveries through the generation of real-world evidence. The TriNetX platform is HIPAA and GDPR compliant. For more information, visit TriNetX at *www.trinetx.com* or follow *@TriNetX* on Twitter.
